

For the Patient: BRAJPEM

Other Names: Adjuvant Treatment of Resected Triple Negative Breast Cancer using Pembrolizumab

BR = BReast
AJ = AdJuvant
PEM = Pembrolizumab

ABOUT THIS MEDICATION

What is this drug used for?

- Pembrolizumab is a drug given before and after breast cancer surgery (called neoadjuvant and adjuvant therapy), in the hope of destroying breast cancer cells that may have spread to other parts of your body.
- This treatment is for patients who have already completed treatment with a combination of pembrolizumab and chemotherapy, followed by surgery. It can also be used while you are waiting for surgery.

How does this drug work?

 Pembrolizumab (pem" broe liz' ue mab) is a monoclonal antibody, a type of protein designed to help your own body's immune system target cancer cells to stop them from growing.

INTENDED BENEFITS

This treatment may reduce the chance of your breast cancer coming back and may improve your overall survival or chance of a cure.

TREATMENT SUMMARY

How is this drug given?

- Pembrolizumab will be given to you as an infusion into a vein, intravenously (IV) over a period of approximately 30 minutes.
- You will be treated with pembrolizumab once every 3 weeks. This 3 weeks period is called a "cycle". You will receive a total of 17 cycles or approximately 1 year of pembrolizumab. This includes the cycles of pembrolizumab received before surgery.

The calendar below outlines your overall treatment plan for each cycle.

Developed: 1 Feb 2023

Revised: 1 Feb 202

С	DATE	TREATMENT PLAN
Y		➤ Week 1 → pembrolizumab on Day 1
L E		Week 2 → no treatment
1		Week 3 → no treatment

This treatment will continue to complete 17 total cycles of pembrolizumab.

What will happen while I am being treated?

- A blood test is done before receiving each treatment cycle. You will see your clinician every 3 or 6 weeks, before treatments.
- The treatment may be held based on your blood test results and/or other side effects.

OTHER INSTRUCTIONS

It is very important to report side effects immediately to your doctor. Do not manage side effects at home without speaking with your doctor. Be aware that symptoms may be delayed and can develop months after your last dose. If other doctors are involved in your care it is important they know you are on these treatments and the autoimmune side effects they can cause.

What other drugs or foods can interact with pembrolizumab?

- Other drugs may interact with pembrolizumab. Check with your doctor or pharmacist before you start or stop taking any other drugs including all prescription and nonprescription medicines, steroids or other medicines that lower your immune response, vitamins, and herbal supplements.
- The drinking of alcohol (in small amounts) does not appear to affect the safety or usefulness of pembrolizumab.

Other important things to know:

- Before you are given pembrolizumab, talk to your doctor or pharmacist if you:
 - o have an active condition where your immune system attacks your body (autoimmune disease), such as ulcerative colitis, Crohn's disease, lupus, rheumatoid arthritis or sarcoidosis.
 - o take other medicines that make your immune system weak. Examples of these may include steroids, such as prednisone or dexamethasone.
 - had an organ transplant, such as a kidney transplant.
 - have any other significant medical conditions.
- It is very important to tell your doctor immediately if you have, or develop, any of the symptoms listed under Serious Side Effects. Do not try to treat or diagnose symptoms yourself.
- Pembrolizumab may damage sperm and may harm the baby if used during

Developed: 1 Feb 2023

BC Cancer Protocol Summary (Patient Version) BRAJPEM Revised:

- pregnancy. You must use birth control while being treated with pembrolizumab and for at least 4 months after your last dose. Tell your doctor right away if you or your partner becomes pregnant.
- Pembrolizumab may pass into your breast milk. Do not breastfeed during treatment
- Tell doctors or dentists that you are being treated with pembrolizumab before you receive any treatment from them. You should carry the BC Cancer wallet card for pembrolizumab to alert health providers.
- Do not receive any immunizations before discussing with your doctor

SIDE EFFECTS AND WHAT TO DO ABOUT THEM

Pembrolizumab may cause serious immune reactions against your own body (autoimmune) affecting many parts.

Are there any risks?

Unexpected and unlikely side effects can occur with any drug treatment. The ones listed below are particularly important for you to be aware of as they are directly related to the common actions of the drug in your treatment plan.

What is the most important information I should know about SERIOUS SIDE **EFFECTS?**

- Pembrolizumab can cause serious side effects in many parts of your body. These side effects are most likely to begin during treatment; however, side effects can show up months after your last treatment with pembrolizumab.
- *Tell* your doctor as soon as possible if you have any of serious side effects listed in the table below or your symptoms get worse.
- Do not try to treat or diagnose symptoms yourself. Getting medical treatment right away may keep the problem from becoming more serious.

The following side effects were most frequently reported:

Very common (more than 1 in 10 people)

- diarrhea
- itching, rash
- joint pain
- feeling tired
- feeling less hungry
- cough

Developed: 1 Feb 2023 Revised:

SERIOUS SIDE EFFECTS	How common is it?
Inflammation of the intestines (colitis)	Common
Symptoms may include:	
diarrhea (loose stools) or more bowel movements than usual. Do	(less than 1 in
not treat the diarrhea yourself.	10 but more
blood or mucus in stools or dark, tarry, sticky stools	than 1 in 100)
severe stomach pain (abdominal pain) or tenderness	
Inflammation of the thyroid gland (hyperthyroidism,	Common
hypothyroidism)	
Symptoms may include:	(less than 1 in
rapid heart beat	10 but more
weight loss or gain	than 1 in 100)
increased sweating	
hair loss	
feeling cold	
constipation or diarrhea	
your voice gets deeper	
muscle aches	
changes in sleep patterns	_
Inflammation of the pituitary gland (hypophysitis, hypopituitarism,	Common
including secondary adrenal insufficiency)	4 4
Symptoms may include:	(less than 1 in
weight loss	10 but more
increased sweating, hot flashes height and facial and public	than 1 in 100)
hair loss (includes facial and pubic)	
feeling cold	
headaches that will not go away or unusual headache	
decreased sex drive	
vision problems	
excessive thirst and urination Inflormation of the lungs (programme)	Camara an
Inflammation of the lungs (pneumonitis)	Common
Symptoms may include: • shortness of breath	(lose than 1 in
	(less than 1 in 10 but more
chest pain coughing	than 1 in 100)
coughing Problems with muscles	Common
Symptoms may include:	Common
back pain	(less than 1 in
spasms	10 but more
spasifis weakness	than 1 in 100)
weakness muscle pain	andii i iii 100)
• muscie pain

SERIOUS SIDE EFFECTS	How common is it?
Skin problems	Common
Symptoms may include:	
• rash	(less than 1 in
dry skin	10 but more
	than 1 in 100)
Problems in other organs (nervous system, eyes)	Common
Symptoms may include:	/I.a.a. Albana Alba
tingling, numbness, lack of energy	(less than 1 in 10 but more
changes in eyesight	than 1 in 100)
dizziness Ricad augus problems (type 4 diabetes mellitus)	,
Blood sugar problems (type 1 diabetes mellitus) Symptoms may include:	Common
 hunger or thirst 	(less than 1 in
a need to urinate more often	10 but more
weight loss	than 1 in 100)
Inflammation of the liver (hepatitis)	Uncommon
Symptoms may include:	Oncommen
nausea or vomiting	(less than 1 in
loss of appetite	100 but more
pain on the right side of your stomach	than 1 in 1000)
yellowing of your skin or the whites of your eyes	,
dark urine	
bleeding or bruise more easily than normal	
Inflammation of the kidneys (nephritis)	Uncommon
Symptoms may include:	
changes in the amount or colour of your urine	(less than 1 in
	100 but more
	than 1 in 1000)
Problems in the pancreas	Rare
Symptoms may include:	
abdominal pain	(less than 1 in
nausea and vomiting	1000 but more
	than 1 in
Infusion reactions	10000)
Symptoms may include:	Rare
shortness of breath	(less than 1 in
itching or rash	1000 but more
dizziness	than 1 in
• fever	10000)
wheezing	
• flushing	
feeling like passing out	

BC Cancer Protocol Summary (Patient Version) BRAJPEM Developed: 1 Feb 2023 Revised:

OTHER SIDE EFFECTS	MANAGEMENT
Pain or tenderness may occur where the needle was placed.	Apply cool compresses or soak in cool water for 15-20 minutes several times a day.
Nausea and vomiting may occur after your treatment. Most people have little or no nausea.	 You may be given a prescription for antinausea drug(s) to take before your treatment and/or at home. It is easier to prevent nausea than treat it once it has occurred, so follow directions closely. Drink plenty of fluids. Eat and drink often in small amounts. Try the ideas in Practical Tips to Help Manage Nausea*
	 If nausea and vomiting is persistent and you have other symptoms of hepatitis, tell your doctor as soon as possible. (see the table above for serious side effects.)
Fever may sometimes occur.	 Take acetaminophen (e.g., TYLENOL®) every 4-6 hours, to a maximum of 4 g (4000 mg) per day. If you have other symptoms of colitis, tell your doctor as soon as possible. (see the table above for serious side effects.)
Constipation may sometimes occur.	 Exercise if you can. Drink plenty of fluids. Try ideas in Food Choices to Manage Constipation.* If you have other symptoms of colitis, tell your doctor as soon as possible. (see the table above for serious side effects.)
Headache may sometimes occur.	 Take acetaminophen (e.g., TYLENOL®) every 4-6 hours if needed, to a maximum of 4 g (4000 mg) per day. If headache is persistent and you have other symptoms of inflammation of glands or Inflammation of the nerves, tell your doctor as soon as possible. (see the table above for serious side effects.)
Loss of appetite and weight loss sometimes occur.	 Try the ideas in Food Ideas to Help with Decreased Appetite. If loss of appetite is persistent and you have other symptoms of hepatitis, tell your doctor as soon as possible. (see the table above for serious side effects.)

OTHER SIDE EFFECTS	MANAGEMENT
Tiredness and lack of energy may sometimes occur.	 Do not drive a car or operate machinery if you are feeling tired. Try the ideas in Fatigue/Tiredness- patient handout* If tiredness is persistent and you have other symptoms of hepatitis or inflammation of glands, tell your doctor as soon as possible. (see the table above for serious side effects.)
Hair loss is rare with pembrolizumab.	If hair loss is a problem, refer to Resources for Hair Loss and Appearance Changes – Patient Handout.*

BC Cancer Protocol Summary (Patient Version) BRAJPEM Developed: 1 Feb 2023

Revised:

This patient is receiving immunotherapy at the BC Cancer and is at risk of immune-related toxicities which may be life threatening and require urgent management.

Immunotherapy toxicities are different from those encountered with standard chemotherapy or targeted therapies. The immune system may become dysregulated during immunotherapy treatment, leading to symptoms and findings which mimic autoimmune disorders. Adverse events can occur during or following treatment and can be life threatening. Any organ system in the body is at risk including, but not limited to:

Lungs (pneumonitis, pleuritis, sarcoidosis)

Gastrointestinal (colitis, ileitis, pancreatitis)

Immunotherapy Regimen _____

Liver (hepatitis)

Skin (rash, Stevens-Johnson syndrome)

Endocrine (hypophysitis, adrenal insufficiency, hypo/hyperthyroidism, type 1 diabetes mellitus) Renal (interstitial nephritis)

Blood (hemolytic anemia, thrombocytopenia, neutropenia)

Neurologic (encephalitis, Guillain-Barré syndrome, meningitis, myasthenia gravis, neuropathy)

Musculoskeletal (myositis, arthritis)

Cardiovascular (pericarditis, myocarditis, vasculitis)

Ophthalmologic (uveitis, scleritis, episcleritis, conjunctivitis, retinitis)

Management of immune-related toxicities necessitates prompt coordination with a medical oncologist with initiation of high dose corticosteroids, and may require referral to the appropriate subspecialty. If you suspect your patient is presenting with immune-related toxicity, please contact the patient's medical oncologist directly or if after hours contact the on-call physician, or as per your local centre's process (next page). Additional information on immunotherapy toxicity treatment algorithms is located at the end of the above posted protocol at www.bccancer.bc.ca.

BC Cancer Protocol Summary (Patient Version) BRAJPEM Developed: 1 Feb 2023 Revised:

BC CANCER CENTRES	CONTACT INFORMATION AND PROCESS
Abbotsford	Contact the patient's medical oncologist immediately by calling the Abbotsford Regional Hospital and Cancer Centre (ARHCC) switchboard at (604) 851-4700 and ask for the on-call medical oncologist (24-hour call system).
Kelowna	Between 8:30 am – 5:00 pm, call (250) 712-3900 (press "8" to speak to the Kelowna Centre receptionist) and have an oncologist paged. Outside these hours, call the Kelowna General Hospital switchboard at (250) 862-4000 and ask for the on-call medical oncologist.
Prince George	Between 8:30 am – 4:00 pm Monday to Friday, call (250) 645-7313. Outside these hours, go to the emergency department at the University Hospital of Northern British Columbia (UHNBC).
Surrey	Between 8:30 am – 4:00 pm Monday to Friday (except Statutory holidays), call the Nursing Phone Line at (604) 930-4053. Outside these hours, call the Surrey Memorial Hospital switchboard at (604) 581-2211 and ask for the Fraser Valley on-call medical oncologist.
Vancouver	Between $8:30\text{am}-4:30\text{pm}$ Monday to Friday, call the Patient Nurse Line at (604) 877-6025. Outside these hours, call the inpatient unit at (604) 877-6000 and press 1, and ask for the on-call medical oncologist.
Victoria	Between 8:30 am – 4:30 pm Monday-Friday (except Statutory holidays), call (250) 519-5500, and press 1 then 4 to speak with a registered nurse. Outside these hours, call the Royal Jubilee Hospital switchboard at (250) 370-8000 and ask for the on-call medical oncologist.
