BC Cancer Protocol Summary for Neoadjuvant or Adjuvant Therapy for Breast Cancer using Cyclophosphamide, DOXOrubicin and DOCEtaxel

Protocol Code:                    UBRAJDAC
Tumour Group:                    Breast
Contact Physician:              Dr. Andrew Attwell

ELIGIBILITY:
- Less than or equal to 65 years of age
- ECOG 0-1
- Node positive early stage breast cancer (any T, N1-3)
- HER-2 negative
- Adequate renal and hepatic function
- Adequate cardiac function
- Filgrastim (G-CSF) is not covered as a benefit at BC Cancer
- BC Cancer Compassionate Access Program (CAP) approval.

EXCLUSIONS:
- Age greater than 65 years
- ECOG 2-4
- HER-2 positive
- Significant hepatic dysfunction
- Congestive heart failure (LVEF less than 45%) or other significant heart disease
- greater than or equal to grade 2 sensory or motor neuropathy
- Pregnancy or lactation
- Unsuitable for aggressive adjuvant chemotherapy

TESTS:
- Baseline: CBC & diff, platelets, bilirubin, creatinine, liver enzymes
- Before each treatment: CBC & diff, platelets
- If clinically indicated: bilirubin, creatinine, liver enzymes

PREMEDICATIONS:
- Antiemetic protocol for highly emetogenic chemotherapy (see protocol SCNAUSEA)
- Dexamethasone 8 mg PO bid for 3 days starting one day prior to DOCEtaxel. Patient must receive 3 doses prior to treatment.
- DOCEtaxel-induced onycholysis and cutaneous toxicity of the hands may be prevented by wearing frozen gloves starting 15 minutes before DOCEtaxel infusion until 15 minutes after end of DOCEtaxel infusion; gloves should be changed after 45 minutes of wearing to ensure they remain cold during the entire DOCEtaxel infusion.
TREATMENT:

<table>
<thead>
<tr>
<th>Drug</th>
<th>Dose</th>
<th>BC Cancer Administration Guideline</th>
</tr>
</thead>
<tbody>
<tr>
<td>DOXOrubicin</td>
<td>50 mg/m²</td>
<td>IV push</td>
</tr>
<tr>
<td>cyclophosphamide</td>
<td>500 mg/m²</td>
<td>IV in NS or D5W 100 to 250 mL over 20 min to 1 hour</td>
</tr>
<tr>
<td>DOCEtaxel</td>
<td>75 mg/m²</td>
<td>IV in NS 250 ml over 1 hour (use non-DEHP equipment)</td>
</tr>
<tr>
<td>filgrastim (G-CSF)</td>
<td>5 mcg/kg/day</td>
<td>SC</td>
</tr>
<tr>
<td></td>
<td>Days:3 to10</td>
<td>(adjust as needed**)</td>
</tr>
</tbody>
</table>

- Repeat every 21 days x 6 cycles.
- ** reduce Filgrastim treatment duration if ANC greater than 10 or intolerable bone pain. Filgrastim **should not be stopped** before the time of the predicted nadir from chemotherapy.

DOSE MODIFICATIONS:

1. Hematological:

<table>
<thead>
<tr>
<th>ANC (x10⁹/L)</th>
<th>Platelets (x10⁹/L)</th>
<th>Dose (all drugs)</th>
</tr>
</thead>
<tbody>
<tr>
<td>greater than or equal to 1.5</td>
<td>greater than or equal to 90</td>
<td>100%</td>
</tr>
<tr>
<td>1.0 to less than 1.5</td>
<td>70 to less than 90</td>
<td>75%</td>
</tr>
<tr>
<td>less than 1.0</td>
<td>less than 70</td>
<td>delay</td>
</tr>
</tbody>
</table>

2. Hepatic dysfunction: Dose modifications required for DOXOrubicin and for DOCEtaxel. (see BC Cancer Drug Manual).

3. Renal dysfunction: Dose modification may be required for cyclophosphamide if creatinine clearance less than 0.3 mL/sec, i.e., less than 18 mL/minute (see BC Cancer Drug Manual).

PRECAUTIONS:

1. Febrile Neutropenia: DOCEtaxel containing adjuvant chemotherapy for breast cancer is associated with an extreme risk of febrile neutropenia approaching 40% in real practice settings, as reported in two outcome studies from Ontario. Thus, strong consideration should be given to using prophylactic G-CSF. Febrile neutropenia rates with prophylactic G-CSF are lower (5 to 7%) making this the safer option. Fever or other evidence of infection must be assessed promptly and treated aggressively.

2. Cardiac Toxicity: DOXOrubicin is cardiotoxic and must be used with caution, if at all, in patients with severe hypertension or cardiac dysfunction. Cardiac assessment
recommended if lifelong dose of 400 mg/m² to be exceeded (see BC Cancer Drug Manual).

3. **Hypersensitivity**: (specify whether this refers to DOCTaxel only). Reactions are common but it is not necessary to routinely initiate the infusion slowly. If slow initiation of infusion is needed, start infusion at 30 mL/h x 5 minutes, then 60 mL/h x 5 minutes, then 120 mL/h x 5 minutes, then complete infusion at 250 mL/h (for 500 mL bag, continue 250 mL/h for 5 minutes and then complete infusion at 500 mL/h). Refer to BC Cancer Hypersensitivity Guidelines.

4. **Extravasation**: DOXOrubicin causes pain and tissue necrosis if extravasated. Refer to BC Cancer Extravasation Guidelines.

5. **Fluid retention**: Dexamethasone premedication must be given to reduce incidence and severity of fluid retention.

6. **Hepatic Dysfunction**: DOCTaxel undergoes hepatic metabolism. Hepatic dysfunction (particularly elevated AST) may lead to increased toxicity and usually requires a dose reduction. Baseline liver enzymes are recommended before cycle 1 and then if clinically indicated (eg, repeat liver enzymes prior to each treatment if liver enzymes are elevated, evolving liver metastases are suspected, or there is unexpectedly severe toxicity such as severe neutropenia).

Call Dr. Andrew Attwell or tumour group delegate at (604) 877-6000 or 1-800-663-3333 with any problems or questions regarding this treatment program.
