ELIGIBILITY:
- Locally advanced or metastatic squamous cell cancer of the genitourinary system.
- Any age. Patients over 69 years will be assessed individually.
- ECOG performance status 0-2.
- No hearing impairment.
- Adequate bone marrow function.
- Creatinine clearance greater than 50 mL/minute as calculated by Cockcroft/Gault formula (see page 2)

TESTS:
- Baseline: CBC and differential, platelets, creatinine, serum albumin
- Before each treatment: CBC and differential, platelets, creatinine
- If clinically indicated: total bilirubin, liver enzymes

PREMEDICATIONS:
- ondansetron 8 mg PO daily 30 minutes before CISplatin each day
- dexamethasone 12 mg PO daily 30 minutes before CISplatin each day
- dexamethasone 4 mg PO daily 12 hours after CISplatin each day
- Day 4 and 5: dexamethasone 4 mg PO bid
- PRN medications may include dimenhydrinate, prochlorperazine, metoclopramide and lorazepam
TREATMENT:
Chemotherapy:

<table>
<thead>
<tr>
<th>Drug</th>
<th>Dose</th>
<th>BC Cancer Administration Guideline</th>
</tr>
</thead>
<tbody>
<tr>
<td>fluorouracil</td>
<td>1000 mg/m²/day for 4 days (total dose = 4000 mg/m² over 96 h)</td>
<td>IV in D5W to a total volume of 480 mL by continuous infusion at 5 mL/h via appropriate infusor device*</td>
</tr>
<tr>
<td>CISplatin</td>
<td>25 mg/m² daily x 3 days** (total dose per cycle = 75 mg/m²)</td>
<td>IV in 500 mL NS over 45 minutes</td>
</tr>
</tbody>
</table>

*Inpatients: 1000 mg/m²/day in 1000 mL D5W by continuous infusion daily over 24 h for 4 days

**For patients with an excellent performance status who are being treated before radiation therapy has begun, the CISplatin total dose may be increased to 100 mg/m² given as 25 mg/m² daily for 4 days (cycles 1-4). In some circumstances the total dose of CISplatin may be given as a single dose with appropriate pre and post hydration.

Repeat every 28 days x 4-6 cycles. Discontinue if no response after 2 cycles.

Radiation Therapy: [policy awaiting input from GU Radiation Oncology Group].

DOSE MODIFICATIONS:

1. Hematological

Day 1 counts:

<table>
<thead>
<tr>
<th>ANC (x10⁹/L)</th>
<th>Platelets (x10⁹/L)</th>
<th>Dose - Fluorouracil only</th>
</tr>
</thead>
<tbody>
<tr>
<td>greater than or equal to 1.5 and greater than or equal to 100</td>
<td>100%</td>
<td></td>
</tr>
<tr>
<td>less than 1.5 or less than 100</td>
<td>Delay x 1 week then reassess</td>
<td></td>
</tr>
</tbody>
</table>
2. **Renal**

Creatinine clearance based on day 1 serum creatinine. Recalculate using current weight.

<table>
<thead>
<tr>
<th>CrCl (By Cockcroft/Gault formula)</th>
<th>Dose - CISplatin only</th>
</tr>
</thead>
<tbody>
<tr>
<td>greater than 75 mL/minute</td>
<td>100%</td>
</tr>
<tr>
<td>50-75 mL/minute</td>
<td>50%</td>
</tr>
<tr>
<td>less than 50 mL/minute</td>
<td>Delay x 1 week then reassess</td>
</tr>
</tbody>
</table>

*Cockcroft/Gault formula:*

\[
CrCl = \frac{N \times (140 - \text{age}) \times \text{weight (kg)}}{\text{serum creatinine (micromol/L)}}
\]

*Where N = 1.04 for females, and 1.23 for males*

3. **Neurotoxicity:** If clinically significant hearing loss or functionally significant peripheral neuropathy occurs, discontinue CISplatin. Replace with mitoMYcin 10 mg/m² on day 1 of every second cycle (maximum cumulative dose 20 mg/m²). (See BCCA Cancer Drug Manual for administration guidelines).

4. **Gastrointestinal Toxicity**
   
   (a) **Nausea and vomiting:** Grade 4 (greater than 10 episodes in 24 h or requires parenteral support, dehydration) - not helped by antiemetics. Decrease CISplatin dose to 80%, or QUIT.
   
   (b) **Stomatitis:** Grade 3-4 (painful erythema, edema or ulcers and cannot eat). If necessary, delay next cycle until recovery. Decrease duration of fluorouracil infusion to 3 days (1000 mg/m²/24 hours x 72 hours; total dose per cycle = 3000 mg/m²).
   
   (c) **Diarrhea:** Grade 4 (increase of greater than or equal to 10 stools/day or grossly bloody diarrhea; dehydration). Decrease duration of fluorouracil infusion to 3 days (1000 mg/m²/24 hours x 72 hours; total dose per cycle = 3000 mg/m²).
PRECAUTIONS:

1. **Nausea and vomiting** are common and patients should be treated with ondansetron and dexamethasone before each dose of CISplatin (see premedication section).

2. **Renal toxicity** may occur with a salt and water losing nephropathy. Patients should be encouraged to maintain good oral hydration.

3. **Myocardial ischemia and angina occurs rarely in patients receiving fluorouracil or capecitabine.** Development of cardiac symptoms including signs suggestive of ischemia or of cardiac arrhythmia is an indication to discontinue treatment. If there is development of cardiac symptoms patients should have urgent cardiac assessment. Generally re-challenge with either fluorouracil or capecitabine is not recommended as symptoms potentially have a high likelihood of recurrence which can be severe or even fatal. Seeking opinion from cardiologists and oncologists with expert knowledge about fluorouracil / capecitabine toxicity is strongly advised under these circumstances. The toxicity should also be noted in the patient’s allergy profile.

4. **CNS toxicity** such as tinnitus, mild high frequency hearing loss and delayed peripheral neuropathy may occur secondary to CISplatin.

5. **Nutrition:** It is important to maintain weight if possible and early consultation with a nutritionist to advise about aggressive oral nutritional support and/or an enteral feeding tube is recommended.

6. **Possible drug interactions with fluorouracil and warfarin, phenytoin and fosphenytoin** have been reported and may occur at any time. Close monitoring is recommended (eg, for warfarin, monitor INR weekly during fluorouracil therapy and for 1 month after stopping fluorouracil).

Call **GU Systemic Therapy physician at your regional cancer centre** with any problems or questions regarding this treatment program.
