ELIGIBILITY:

- Patients with an advanced soft tissue sarcoma
- Good performance status
- Adequate bone marrow, renal and hepatic function (bilirubin less than 2 x ULN)

TESTS:

- Baseline and before each treatment: CBC & diff, platelets, sodium, potassium, calcium, albumin, creatinine, bilirubin, ALT, alk phos, GGT, LDH and clinical measure of tumour response
- Urine dipstick for blood before each treatment as well as q 8 hours – if positive at any time, notify doctor, send urine sample for urinalysis for verification and accurate measurement of hematuria and refer to supportive care protocol SCMESNA (follow SCMESNA (SAAI) preprinted order - ifosfamide dose to be given over 2 days)
- If clinically indicated: chest x-ray or other imaging to monitor response

PREMEDICATIONS:

- **ondansetron** 8 mg PO/IV 30 to 60 minutes pre-chemotherapy, then 8 mg PO/IV every 8 hours x 2 doses post-chemotherapy
- **dexamethasone** 8 mg PO/IV 30 to 60 minutes pre-chemotherapy, then 4 mg PO/IV every 12 hours x 2 doses post-chemotherapy
- Optional: **netupitant-palonosetron** 300 mg-0.5 mg PO 30 to 60 minutes pre-chemotherapy. Ondansetron is not given pre- or post- chemotherapy if this option is chosen.
- **LORazepam** 1 mg SL every 4-6 hours prn for nausea, sleep or restlessness
- **prochlorperazine** 10 mg PO/IV every 4-6 hours prn for nausea or vomiting
TREATMENT:

</tr>
</thead>
<tbody>
<tr>
<td>DOXOrubicin</td>
<td>60 mg/m²</td>
<td>IV push</td>
</tr>
<tr>
<td>mesna</td>
<td>600 mg/m²</td>
<td>IV in 100 mL NS over 15 minutes</td>
</tr>
<tr>
<td>ifosfamide</td>
<td>5000 mg/m²</td>
<td>IV in 3 L of NS with mesna 2500 mg/m² to infuse over 24 h. Total dose of ifosfamide to be divided equally between three 1 L bags with each litre to be run over 8 h. Total dose of mesna to be divided equally between two 1 L bags with each litre to be y-sited to ifosfamide and run over 12 h.</td>
</tr>
<tr>
<td>mesna</td>
<td>1250 mg/m²</td>
<td>IV in 1 L of NS to infuse over 12 h</td>
</tr>
<tr>
<td>furosemide</td>
<td>20 mg</td>
<td>IV at hour 16 and 28</td>
</tr>
</tbody>
</table>

* Total cumulative dose of ifosfamide generally should not exceed 72000 mg/m² as there is an increased risk of Renal Fanconi Syndrome in children.

Repeat every 21 days

DOSE MODIFICATIONS:

1. Hematological:

<table>
<thead>
<tr>
<th>ANC (x 10⁹/L)</th>

<td></td>
</tr>
</tbody>
</table>

Activated: N/A   Revised: 1 Feb 2020 (antiemetics)
2. **Renal Dysfunction**: If serum creatinine increases greater than 100% or is greater than ULN, calculate creatinine clearance to determine whether ifosfamide should be discontinued:

\[
\text{Creatinine clearance} = \frac{N^* \times (140 - \text{Age}) \times \text{Weight (kg)}}{\text{Serum creatinine}}
\]

* For males N= 1.23; For females N=1.04

<table>
<thead>
<tr>
<th>CrCl (ml/min)</th>
<th>Treatment Guidelines</th>
</tr>
</thead>
<tbody>
<tr>
<td>greater than or equal to 50</td>
<td>Continue with ifosfamide</td>
</tr>
<tr>
<td>less than 50</td>
<td>Discontinue treatment with ifosfamide</td>
</tr>
</tbody>
</table>

If renal function does not return to normal between cycles, give DOXOrubicin as a single agent for any further cycles.

If Ifosfamide is discontinued mid-cycle because of decreasing renal function, Mesna infusion should be continued at a dose of 1250 mg/m² for 48 hours following ifosfamide discontinuation.

3. **Mucositis**: Grade 3 or 4, reduce dose of all drugs to 80%

4. **Nausea & Vomiting**: Grade 4 despite optimal use of antiemetics, reduce dose of all drugs to 80% or QUIT

5. **Neutropenic Fever** (with ANC less than 0.5 x 10⁹/L): Once counts have recovered, reduce dose of all drugs to 80%

6. **Hepatic Dysfunction**: For bilirubin 1.5 - 2 times ULN, reduce dose of DOXOrubicin to 50%

**PRECAUTIONS:**

1. **Hematuria**: Refer to supportive care protocol SCMESNA (see SCMESNA (SAAI) preprinted order - *ifosfamide to be given over 2 days*).

2. **CNS Toxicity**: Ifosfamide can cause encephalopathy with symptoms of drowsiness, hallucinations, confusion, seizures and coma. If drowsiness develops while receiving ifosfamide, discontinue all sedating medications and continue ifosfamide. If patient is confused, unarousable or comatose, discontinue ifosfamide. If ifosfamide is the cause of CNS depression, then it should not be given again. If the CNS changes are not due to ifosfamide, then ifosfamide can be reinstituted providing the previous medications contributing to CNS toxicity are not given again with it. If a seizure
occurs on ifosfamide, then that cycle is to be discontinued. Further cycles may be given if the patient is on anticonvulsants.

3. **Cardiac Toxicity:** DOXOrubicin is cardiotoxic and must be used with caution, if at all, in patients with severe hypertension or cardiac dysfunction. Cardiac assessment is recommended if lifelong dose of 450 mg/m² to be exceeded. Refer to BC Cancer Drug Manual.

4. **Extravasation:** DOXOrubicin causes pain and tissue necrosis if extravasated. Refer to BC Cancer Extravasation Guidelines.

5. **Neutropenia:** Fever or other evidence of infection must be assessed promptly and treated aggressively. Refer to BC Cancer Febrile Neutropenia Guidelines.

Call Dr. Christine Simmons or tumour group delegate at (604) 877-6000 or 1-800-663-3333 with any problems or questions regarding this treatment program.
