Bicalutamide (bye-ka-LOO-ta-mide) is a drug that is used to treat prostate cancer. It blocks the effect of testosterone which is a male sex hormone. Bicalutamide is often used with another drug that lowers testosterone levels in the body. It is a tablet that you take by mouth. The tablet contains lactose.

It is important to take bicalutamide exactly as directed by your doctor. Make sure you understand the directions. Bicalutamide may be taken with food or on an empty stomach with a glass of water or juice.

If you miss a dose of bicalutamide, take it as soon as you can if it is within 12 hours of the missed dose. If it is over 12 hours since your missed dose, skip the missed dose and go back to your usual dosing times.

Store bicalutamide tablets out of the reach of children, at room temperature, away from heat, light and moisture.

Other drugs such as warfarin (COUMADIN®) may interact with bicalutamide. Tell your doctor if you are taking this or any other drugs as you may need extra blood tests or your dose may need to be changed. Check with your doctor or pharmacist before you start taking any new drugs.

The drinking of alcohol (in small amounts) does not appear to affect the safety or usefulness of bicalutamide.

Bicalutamide may lower sperm counts after you have taken it for a long time. If you plan to have children, discuss this with your doctor before taking bicalutamide.

Tell doctors or dentists that you are being treated with bicalutamide before you receive any treatment from them.

Side effects are listed in the following table in the order in which they may occur when bicalutamide is used with another drug that lowers testosterone level. Tips to help manage the side effects are included.

<table>

| **Hot flashes** (sudden sweating and feelings of warmth) can sometimes occur when you first start taking bicalutamide. This usually improves as your body adjusts to bicalutamide. Hot flashes are more common when bicalutamide is taken with another drug that lowers testosterone levels. | If hot flashes are troublesome:  
- Take your bicalutamide at bedtime.  
- If night sweats interfere with sleep, try taking your bicalutamide in the morning. |
| **Impotence** (loss of sexual ability) may occur. | • This will return to normal when you stop taking bicalutamide.              |
| **Breast swelling** or soreness may occur, especially when bicalutamide is used alone. Breast swelling or soreness is rare when bicalutamide is taken with another drug that lowers testosterone levels. | • This will return to normal when you stop taking bicalutamide.              |
| **Constipation or diarrhea** may occur.          | To help constipation:  
- Exercise if you can.  
- Drink plenty of fluids (8 cups a day).  
- Try ideas in *Suggestions for Dealing with Constipation*.  
To help diarrhea:  
- Drink plenty of liquids.  
- Eat and drink often in small amounts.  
- Avoid high fibre foods as outlined in *Coping with Diarrhea*.  
**Note:** If lactose in milk usually gives you diarrhea, the lactose in the tablet may be causing your diarrhea. Take LACTAID® just before your bicalutamide dose. |
| **Sugar control** may be affected in diabetics.   | • Check your blood sugar regularly if you are diabetic.                     |
| **Tiredness** and lack of energy may occur.      | • Do not drive a car or operate machinery if you are feeling tired.  
• Try the ideas in *Your bank of energy savings: How people with cancer can handle fatigue*. |
| **Hair loss is rare** with bicalutamide. Your hair will grow back once you stop treatment with bicalutamide. Colour and texture may change. | • Use a gentle shampoo and soft brush.  
• Care should be taken with use of hair spray, bleaches, dyes and perms. |
SEE YOUR DOCTOR AS SOON AS POSSIBLE (DURING OFFICE HOURS) IF YOU HAVE:

- Signs of **anemia** such as unusual tiredness or weakness.
- Signs of **liver problems** such as yellow eyes or skin, white or clay-coloured stools.
- Signs of **kidney problems** such as lower back or side pain, swelling of feet or lower legs, numbness or tingling in feet or hands, or blood in your urine.
- Signs of **lung problems** such as difficulty in breathing.

CHECK WITH YOUR DOCTOR IF ANY OF THE FOLLOWING CONTINUE OR BOTHER YOU:

- Hot flashes.
- Decreased sexual desire or ability.
- Excessive breast swelling or soreness.
- Uncontrolled nausea, vomiting, constipation or diarrhea.
- For diabetics: uncontrolled blood sugars.
- Pain not controlled with acetaminophen.
- Sudden weight gain, swelling of hands, feet or lower legs.
- Skin rash.
- Dizziness, drowsiness, difficulty sleeping, numbness or tingling of hands or feet.
