Bosutinib (boe sue’ ti nib) is a drug that is used to treat some types of cancer. It is a tablet that you take by mouth.

Tell your doctor if you have ever had an unusual or allergic reaction to bosutinib before taking bosutinib.

Blood tests may be taken regularly during treatment. The dose and timing of your treatment may be changed based on the test results and/or other side effects.

It is important to take bosutinib exactly as directed by your doctor. Make sure you understand the directions.

Take bosutinib with food.

If you miss a dose of bosutinib, take it as soon as you can if it is within 12 hours of the missed dose. If it is more than 12 hours since your missed dose, skip the missed dose and go back to your usual dosing times.

If you vomit the dose of bosutinib, do not take a second dose. Let your doctor know as a medication to prevent nausea may be required for future doses.

Other drugs such as ketoconazole (NIZORAL®), aprepitant (EMEND®), rifampin (RIFADIN®), lansoprazole (PREVACID®), and antacids (MAALOX® or TUMS®) may interact with bosutinib. Tell your doctor if you are taking these or any other drugs as you may need extra blood tests or your dose may need to be changed. Check with your doctor or pharmacist before you start or stop taking any other drugs.

Avoid grapefruit and grapefruit juice for the duration of your treatment, as these may interact with bosutinib.

The drinking of alcohol (in small amounts) does not appear to affect the safety or usefulness of bosutinib.

Bosutinib may cause sterility in men. If you plan to have children, discuss this with your doctor before being treated with bosutinib.

Bosutinib may damage sperm and may harm the baby if used during pregnancy. It is best to use birth control while being treated with bosutinib and for 4 weeks after treatment. Tell your doctor right away if you or your partner becomes pregnant. Do not breastfeed during treatment.
• **Store** bosutinib tablets out of the reach of children, at room temperature, away from heat, light, and moisture.

• **Tell** doctors, dentists, and other health professionals that you are being treated with bosutinib before you receive any treatment from them.

**Changes in blood counts**
Bosutinib may cause temporary changes in your blood counts. Your doctor will be following these changes carefully by performing blood tests. Adjustment of your treatment may be needed in certain circumstances.

<table>
<thead>
<tr>
<th>BLOOD COUNTS</th>
<th>MANAGEMENT</th>
</tr>
</thead>
</table>
| Normal white blood cells protect your body by fighting bacteria (germs) that cause infection. **When they are low, you are at greater risk of having an infection.** | To help prevent infection:  
- Wash your hands often and always after using the bathroom.  
- Avoid crowds and people who are sick.  
- Call your doctor **immediately** at the first sign of an infection such as fever (over 100°F or 38°C by an oral thermometer), chills, cough, or burning when you pass urine. |
| Normal platelets help your blood to clot normally after an injury (e.g., cut). **When the platelet count is low, you may be more likely to bruise or bleed.** | To help prevent bleeding problems:  
- Try not to bruise, cut, or burn yourself.  
- Clean your nose by blowing gently. Do not pick your nose.  
- Avoid constipation.  
- Brush your teeth gently with a soft toothbrush as your gums may bleed more easily.  
Some medications such as ASA (e.g., ASPIRIN®) or ibuprofen (e.g., ADVIL®) may increase your risk of bleeding.  
- Do not stop taking any medication that has been prescribed by your doctor (e.g., **ASA for your heart**).  
- For minor pain, try acetaminophen (e.g., TYLENOL®). |

Side effects are listed in the following table in the order in which they may occur. Tips to help manage the side effects are included.

| Nausea and vomiting may occur.| You may be given a prescription for antinausea drug(s) to take at home.  **It is easier to prevent nausea than treat it once it has occurred**, so follow directions closely.  
  - Drink plenty of fluids.  
  - Eat and drink often in small amounts.  
  - Try the ideas in *Food Choices to Help Control Nausea.* |
| Skin rashes may sometimes occur. | If itching is very irritating, call your doctor. Otherwise, be sure to mention it at your next visit. |
| Fever may sometimes occur.     | • Take acetaminophen (e.g., TYLENOL®) every 4-6 hours, to a maximum of 4 g (4000 mg) per day.  
  • If you have fever (over 100°F or 38°C by an oral thermometer) **plus** another sign of infection, call your doctor **immediately**. Other signs of infection include chills, cough, or burning when you pass urine. |
| Diarrhea commonly occurs.      | If diarrhea is a problem:  
  - Drink plenty of fluids.  
  - Eat and drink often in small amounts.  
  - Avoid high fibre foods as outlined in *Food Ideas to Help Manage Diarrhea.* |
| Headache, back pain, muscle, or joint pain may sometimes occur. | Take acetaminophen (e.g., TYLENOL®) every 4-6 hours if needed, to a maximum of 4 g (4000 mg) per day. |
| Swelling of hands, feet, or lower legs may sometimes occur if your body retains extra fluid. | If swelling is a problem:  
  - Elevate your feet when sitting.  
  - Avoid tight clothing. |
| Loss of appetite sometimes occurs. | Try the ideas in *Food Ideas to Help with Decreased Appetite.* |
| Tiredness and lack of energy sometimes occur. | • Do not drive a car or operate machinery if you are feeling tired.  
  • Try the ideas in *Your Bank to Energy Savings: Helping People with Cancer Handle Fatigue.* |
| Hair loss does not occur with bosutinib. | *Please ask your chemotherapy nurse or pharmacist for a copy.* 

*Please ask your chemotherapy nurse or pharmacist for a copy.*
STOP TAKING BOSUTINIB AND SEE YOUR DOCTOR OR GET EMERGENCY HELP IMMEDIATELY IF YOU HAVE:

- Signs of an **infection** such as fever (over 100°F or 38°C by an oral thermometer), shaking chills; severe sore throat, productive cough (coughing up thick or green sputum); cloudy or foul smelling urine; painful, tender, or swollen red skin wounds or sores.
- Signs of **bleeding problems** such as black, tarry stools; blood in urine; pinpoint red spots on skin; extensive bruising.
- Signs of an **allergic reaction** (rare) soon after a treatment including dizziness, fast heart beat, face swelling, or breathing problems.
- Signs of **heart or lung problems** such as fast or uneven heartbeat, chest pain, chest pressure, cough, shortness of breath or difficulty in breathing, swelling of feet or lower legs, or fainting.
- Sudden severe **abdominal pain**.

SEE YOUR DOCTOR AS SOON AS POSSIBLE (DURING OFFICE HOURS) IF YOU HAVE:

- Signs of **anemia** such as unusual tiredness or weakness.
- Signs of **liver problems** such as yellow eyes or skin, white or clay-coloured stools.
- Signs of **kidney problems** such as lower back or side pain, swelling of feet or lower legs.

CHECK WITH YOUR DOCTOR IF ANY OF THE FOLLOWING CONTINUE OR BOTHER YOU:

- Uncontrolled nausea, vomiting, or diarrhea.
- Headache not controlled with acetaminophen (e.g., TYLENOL®).
- Easy bruising or minor bleeding.
- Skin rash or itching.
- Ringing in your ears.
- Dizziness.
- Changes in taste.
