Melphalan oral

For the Patient: Melphalan tablets
Other names: ALKERAN®

BC Cancer Agency

- Melphalan (MEL-fa-lan) is a drug that is used to treat many types of cancer. It is a tablet that you take by mouth.

- Tell your doctor if you have ever had an unusual or allergic reaction to melphalan or chlorambucil before taking melphalan.

- A blood test may be taken before each treatment. The dose and timing of your chemotherapy may be changed based on the test results and/or other side effects.

- It is important to take melphalan exactly as directed by your doctor. Make sure you understand the directions.

- Take melphalan on an empty stomach, at least 1 hour before or 2 hours after eating. Take it with a full glass of water, at the same time each day. If this upsets your stomach, you may take melphalan with food and tell your doctor at your next visit.

- Do not chew or crush melphalan tablets. Swallow whole.

- If you miss a dose of melphalan, take it as soon as you can if it is within 12 hours of the missed dose. If it is over 12 hours since your missed dose, skip the missed dose and go back to your usual dosing times. Call your doctor during office hours to ask about making up the missed dose.

- If you vomit the dose of melphalan within 1 hour of taking it, do not take a second dose. Call your doctor during office hours for advice. You will be told whether you need to take another dose.

- Other drugs such as cimetidine and digoxin (LANOXIN®) may interact with melphalan. Tell your doctor if you are taking these or any other drugs as you may need extra blood tests or your dose may need to be changed. Check with your doctor or pharmacist before you start taking any new drugs.

- Talk to your doctor before receiving any immunizations.

- The drinking of alcohol (in small amounts) does not appear to affect the safety or usefulness of melphalan.
• Melphalan may cause **sterility** in men and **menopause** in women. If you plan to have children, discuss this with your doctor before being treated with melphalan.

• Melphalan may damage sperm and may harm the baby if used during pregnancy. It is best to use **birth control** while being treated with melphalan. Tell your doctor right away if you or your partner becomes pregnant. Do not breast feed during treatment.

• **Store** melphalan tablets in the refrigerator, out of the reach of children.

• **Tell** doctors or dentists that you are being treated with melphalan before you receive any treatment from them.

**Changes in blood counts**
Melphalan may cause temporary changes in your blood counts. Your doctor will be following these changes carefully by performing blood tests. Adjustment of your treatment may be needed in certain circumstances.

<thead>
<tr>
<th>BLOOD COUNTS</th>
<th>MANAGEMENT</th>
</tr>
</thead>
</table>
| Normal white blood cells protect your body by fighting bacteria (germs) that cause infection. **When they are low, you are at greater risk of having an infection.** | To help prevent infection:  
• Wash your hands often and always after using the bathroom.  
• Avoid crowds and people who are sick.  
• Call your doctor **immediately** at the first sign of an infection such as fever (over 100°F or 38°C by an oral thermometer), chills, cough, or burning when you pass urine. |
| Normal platelets help your blood to clot normally after an injury (e.g., cut). **When the platelet count is low, you may be more likely to bruise or bleed.** | To help prevent bleeding problems:  
• Try not to bruise, cut, or burn yourself.  
• Clean your nose by blowing gently. Do not pick your nose.  
• Avoid constipation.  
• Brush your teeth gently with a soft toothbrush as your gums may bleed more easily.  
Some medications such as ASA (e.g., ASPIRIN®) or ibuprofen (e.g., ADVIL®) may increase your risk of bleeding.  
• Do not stop taking any medication that has been prescribed by your doctor (e.g., **ASA for your heart**).  
• For minor pain, try acetaminophen (e.g., TYLENOL®) first, but occasional use of ibuprofen may be acceptable. |
Side effects are listed in the following table in the order in which they may occur. Tips to help manage the side effects are included.

**STOP TAKING MELPHALAN AND SEE YOUR DOCTOR OR GET EMERGENCY HELP IMMEDIATELY IF YOU HAVE:**

- Signs of an **infection** such as fever (over 100°F or 38°C by an oral thermometer), shaking chills; cough, severe sore throat, productive cough (coughing up thick or green sputum); cloudy or foul smelling urine; painful, tender, or swollen red skin wounds or sores.
- Signs of **bleeding problems** such as black, tarry stools; blood in urine; pinpoint red
spots on skin; extensive bruising.

- Signs of an **allergic reaction** (rare) soon after a treatment including dizziness, fast heart beat, face swelling, or breathing problems.
- Signs of **heart problems** such as fast or uneven heartbeat.
- **Seizures** or **loss of consciousness**.
- Signs of **low blood pressure** such as light-headedness, dizziness, or fainting.
- Signs of **lung problems** such as cough, shortness of breath, difficulty and/or change in breathing.

**SEE YOUR DOCTOR AS SOON AS POSSIBLE (DURING OFFICE HOURS) IF YOU HAVE:**

- Signs of **anemia** such as unusual tiredness or weakness.
- Signs of **liver problems** such as yellow eyes or skin, white or clay-coloured stools.
- Signs of **kidney problems** such as lower back or side pain, swelling of feet or lower legs.
- Signs of **gout** such as joint pain.
- Signs of **bladder problems** such as changes in urination, painful burning sensation, presence of blood, or abdominal pain.
- **Sore throat** or **mouth** that makes it difficult to swallow comfortably.
- **Numbness** or **tingling** in feet or hands.

**CHECK WITH YOUR DOCTOR IF ANY OF THE FOLLOWING CONTINUE OR BOTHER YOU:**

- Uncontrolled nausea, vomiting, loss of appetite, or diarrhea.
- Easy bruising or minor bleeding.
- Redness, swelling, pain, or sores on your lips, tongue, mouth, or throat.
- Skin rash or itching.

**REPORT ADDITIONAL PROBLEMS TO YOUR DOCTOR**
