

Record of Exposure to Hazardous Drugs

All employees who prepare or administer hazardous drugs are required to document their daily exposure as per **Provincial Systemic Therapy Policy V-10** (Hazardous Drugs Safe Handling Standards) and WorkSafe BC regulations

This Record of Exposure template contains BC Cancer approved hazardous drugs administered intravenously and by injection. Any clinical trials drugs, oral agents or other drugs classified as hazardous and not presently on this list **may be added to the blank spaces provided.**

To confirm if a drug is classified as hazardous, always refer to the most recent up to date **BC Cancer Hazardous Drugs list** at:
<http://www.bccancer.bc.ca/drug-database-site/Documents/HD%20List.pdf>

Amsacrine																																	
Arsenic trioxide																																	
Atezolizumab																																	
Avelumab																																	
Azacitidine																																	
Bacillus Calmette - Guerin (BCG)																																	
Bendamustine																																	
Bleomycin																																	
Blinatumomab																																	
Bortezomib																																	
Brentuximab																																	
Cabazitaxel																																	
Carboplatin																																	
Carfilzomib																																	
Carmustine																																	
Cisplatin																																	
Cladribine																																	
Cyclophosphamide																																	
Cytarabine																																	
Dacarbazine																																	
Dactinomycin																																	
Daratumumab																																	
Daunorubicin HCl																																	
Dexrazoxane																																	
Docetaxel																																	

Record of Exposure to Hazardous Drugs

Doxorubicin																															
Doxorubin, pegylated liposomal																															
Durvalumab																															
Epirubicin																															
Eribulin																															
Etoposide																															
Fludarabine																															
Fluorouracil																															
Gemcitabine																															
Idarubicin																															
Ifosfamide																															
Inotuzumab ozogamicin																															
Irinotecan																															
Methotrexate																															
Melphalan																															
Mitomycin																															
Mitoxantrone																															
Oxaliplatin																															
Paclitaxel																															
Paclitaxel nab (abraxane)																															
Pamidronate																															
Pemetrexed																															
Pertuzumab																															
Pralatrexate																															
Raltitrexed																															
Romidepsin																															
Streptozocin																															
Temsirolimus																															
Teniposide																															
Thiotepa																															
Topotecan																															
Trastuzumab																															
Trastuzumab emtasine																															
Vinblastine																															
Vincristine																															
Zoledronic acid																															

INJECTIONS
