During cancer treatment, it is important that you are able to eat enough to keep up your strength and help your body heal. There may be times during your treatment when your appetite is decreased. If this happens, the ideas below may be helpful.

**General Tips**
- **Make every mouthful count** by choosing high calorie, high protein foods.
- **Eat often.** Try a few mouthfuls even if you are not hungry. Try snacking at least every 2 hours.
- **Eat what you feel like eating.** It is okay to eat the same foods over and over again if only a few foods appeal to you.
- **Carry snacks with you** if you are going to be away from home during the day, at treatment or at work.
- **Eat your biggest meal when your appetite is best.** This may be at breakfast time rather than at the traditional evening meal.
- **Take a break from eating** to rest, take a walk or get some fresh air.
- **Ask family and friends to help you** with cooking and shopping.
- **Make eating more enjoyable** by inviting friends and family to eat with you.

**High Energy, High Protein Meal Ideas**
- French toast, pancakes or waffles with butter and syrup
