

The BC Cancer Agency Prevention Programs and Comprehensive School Health

- We support tobacco-free school grounds everywhere in BC.
- Our sun safety programs encourage schools and daycares to create sun-safe play areas that provide shade, encourage appropriate clothing and sunscreen use, and educate kids and parents about sun-safe practices.

Healthy kids learn better, and healthy habits are more durable when learned young. We support BC schools in their efforts to help students realize their full potential as learners and BC citizens.

- At www.hi5living.org, we encourage personalized learning for all students developing their healthy living plans.
- To learn more about sun safety and protect against harmful UV exposure, visit www.suntips.ca

- We partner with health authorities to educate school communities about cancer prevention and healthy lifestyles.
- We work with Healthy Schools Coordinators and other educational stakeholders.
- We offer evidence-based health information to PACs, Pro-D events, and many others.

- We recognize Healthy Living Schools and Schools of Excellence that encourage healthy behaviours in five key areas of prevention:
 - nutritious food
 - physical activity
 - healthy weight
 - tobacco-free schools
 - sun safety
