

Unattached Patient Process

Cervix screening in BC does not require a provider visit to get screened. If a patient does not have a primary care provider but meets all the criteria for cervix self-screening, they are eligible to receive a self-screening kit. If their test result recommends either a follow-up Pap test or colposcopy, the patient will be connected with a clinic, known as a Linked Clinic, in their community for support and follow-up. The flowchart below illustrates this process:
